

## Groundwater resources by aquifer type, extent and productivity

### Porous aquifers

- Extensive and highly productive aquifers
- Local or discontinuous productive aquifers resp. extensive but only moderately productive aquifers

### Porous and fractured aquifers

- Extensive and highly productive aquifers
- Local or discontinuous productive aquifers resp. extensive but only moderately productive aquifers

### Fractured and karstified aquifers

- Extensive and highly productive aquifers
- Local or discontinuous productive aquifers resp. extensive but only moderately productive aquifers

### Aquitard, porous or fractured

- Local groundwater resources, especially in fractured and weathered solid rocks, but deeper more productive aquifers not excluded
- No groundwater resources worth mentioning, even at depth
