Courses for MSc Program established and held

Within the task 82 the BGR supports the University of Namibia with the establishment of an MSc Program of Applied and Environmental Geology. In total four courses, including lectures, exercises, and exams, were prepared and held by the BGR between 2013 to 2015:

- Hydro-geochemistry
- Protection and Management of Water Resources
- Introduction to Isotopes
- Applied GIS and Remote Sensing

The last course took place in April 2015. Additionally an Isotope laboratory was set up and staff was trained. Where possible some of the students also joint field trips to train their practical skills. For the coming semester 2015/2016 the courses “Hydro-geochemistry” and “Protection and Management of Water Resources” again will be held by BGR members.
